KEEP ON PHONING WHILE DRIVING!

December 4, 2007: Bluesky received approval by Industry Canada for its hands free kit 1001A . This rearview Bluetooth mirror is right in time to meet legal expectations set by the new law that bans cell phoning while driving.

This innovating advanced Bluetooth technology device displays the caller Id. Equipped with a built-in rear speaker, it enables voice record and playback, which is highly convenient when the person you are talking to gives his contact details, for example.

The user of this last generation interior rearview mirror will also enjoy the earpiece for private conversation.

The Bluesky Handsfree Car Kit with Caller Id 1001A is wireless, thus no need to modify any of the car's interior fittings. The unit simply clamps onto the existing rearview mirror within seconds.

This innovative product combines simplicity, convenience, security and complies with the latest road safety regulations.

Bluesky, a company based in Montreal, is a supplier of state-of-the-art technology products.
